Narrative Description of Indicator

To report the target data for this indicator, MSDE generated State and local reports throughout the reporting period from the statewide Part C database. The reports are based on the calculation of the number of days between the date of referral and the date of the initial IFSP meeting for each child referred in a selected period. The number/percent of meetings held within timelines and the reasons why IFSPs were not held within timelines are provided. For this calculation, the referral date is considered Day #1 and an untimely IFSP meeting would be any meeting held on Day #46 or later. When the date of an IFSP meeting (46 days or later from the referral date) is entered into the database, a prompt appears requesting that the late meeting be entered. Summary and individual child record data generated by the 45 day timeline is available to LITP staff.

Progress was noted from FFY 2007 (94.8%) to FFY 2008 (98.7%) in the percentage of eligible infants and toddlers for whom an evaluation, assessment, and initial IFSP were completed within 45 days of the referral. Twenty-two of the 24 LITP sites made progress or maintained their current level of compliance with this indicator.
