Narrative Description of Indicator

Based on data provided by OSEP on [www.ideadata.org](http://www.ideadata.org), the 24 LITPs provided early intervention services to 1.59% of the Maryland 2010 resident birth to one-year-old population. The percentage of children birth to one year of age receiving early intervention services in Maryland increased from 1.47% in FFY 2009 to 1.59% in FFY 2010. Compared to national data, Maryland provided early intervention services to 0.56% more children birth to one year of age than the national baseline of 1.03% and ranked 11th among the 50 States and U.S. territories. The resident population of birth to one-year-old children decreased statewide by 4,988 from FFY 2009 to FFY 2010, a 6.51% decrease. From FFY 2009 to FFY 2010, the number of birth to one-year-old children referred to the LITPs increased by over 4%.

Fourteen of the 24 LITPs met the State target for the percentage of birth to one year old children receiving early intervention services. Efforts were made throughout the State to increase public awareness of the program, especially with primary health care providers, in an attempt to increase the number of referrals from both parents and providers. If the State target was not met, LITPs were required to develop and implement improvement plan strategies and, as necessary, received technical assistance from MSDE.
