#### Narrative Description of Indicator

Based on data provided by OSEP on [www.ideadata.org](http://www.ideadata.org), Maryland provided early intervention services to 3.39% of the 2011 Maryland resident birth to three-year-old population of children and met the State target of providing early intervention services to 2.88% of the Maryland 2011 resident birth to three-year-old population. Compared to national data, Maryland provided early intervention services to 0.60% more children birth to three years of age than the national baseline and ranked 17th among the 50 States and the U.S territories. The Maryland resident population for birth to 3-year-old children decreased in FFY 2011 by 70 (< 1%). During the same year, the 24 LITPs received 318 (2.3%) more referrals than they received in FFY 2010.

Fifteen of Maryland's 24 LITPs met the State target of 2.88% of the percentage of birth to three-year-old children receiving early intervention services. Meeting the State target is attributed to State/local targeted public awareness activities, including collaboration with local childcare providers, physicians, hospitals, audiologists, and local departments of social services. Another contributing factor is increased knowledge of many parents, as a result of popular media activities on the importance of the early childhood years in preparing a child for school. If the State target was not met, LITPs were required to develop and implement improvement plan strategies and, as necessary, received technical assistance from MSDE.
