### Narrative Description of Indicator

To report the target data for this indicator, MSDE generated State and local reports throughout the reporting period from the statewide Part C database. The reports are based on the calculation of the number of days between the date of referral and the date of the initial IFSP meeting for each child referred in a selected period. The number/percent of meetings held within the timelines and the reasons why IFSPs were not held within timelines are provided. For this calculation, the referral date is considered Day #1 and an untimely IFSP meeting would be any meeting held on Day #46 or later.

When the date of an untimely IFSP meeting (46 days or later from the referral date) is entered into the database, a prompt appears requesting that the reason for the late meeting be entered. Summary and individual child record data generated by the 45-day timeline is validated by State and LITP staff.

A high level of compliance was again achieved in FFY 2014. A slight decrease was noted from FFY 2013 (99.74%) to FFY 2014 (98.87%; 8,720/8,820) in the percentage of eligible infants and toddlers for whom an evaluation, assessment, and initial IFSP were completed within 45 days of the referral. Eleven of the 24 LITPs met the State target of 100% for this indicator. This high level of compliance occurred despite a statewide increase (3.5%) in the number of referrals of children to the 24 LITPs from FFY 2013 to FFY 2014 and a 31.4% increase in the number of referrals of children from FFY 2007 to FFY 2013.

LITPs that did not attain 100% compliance, were required to develop and implement corrective action or improvement plan strategies and, as necessary, received technical assistance from MSDE.
